

YOUR DRIVERS ENCOUNTER THESE HAZARDS EVERY DAY

Dumping on uneven terrain shifts the center of gravity.

Overhead obstacles are encountered while truck is in motion.

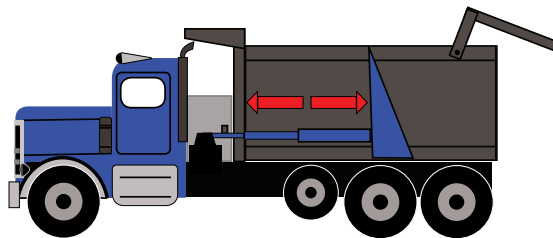

Overhead obstacles are encountered on jobsites.

Dumps become unstable and are prone to tip when:

- Material sticks in the top of the box as it unloads
- Material evacuates the box unevenly
- The bed is raised on uneven terrain
- The jobsite has soft ground causing one side to sink
- The bed is loaded unevenly
- Suspension components are worn or broken
- Tire pressure is inconsistent
- Windy conditions are present while bed is raised

PIK RITE HYDRA RAM TRUCK BODIES

More functionality, higher customer satisfaction, increased profits

- Hydraulic Pusher off loads material while maintaining a low center of gravity!
- More functionality while unloading partial loads or metering the load.
- Increased safety and customer satisfaction
- Decreased accident repairs and costly down time
